# Aladdin

The ultimate in lighting design
Next generation lighting control solution

Aladdin means that the Amiga range of personal computers can be used as powerful tools for lighting design and complete lighting control and effects generation.

Aladdin is a powerful and sophisticated lighting control system with features which meet or exceed the capabilities of dedicated consoles many times more expensive.

Aladdin offers absolute simplicity of programming, online help and ease of use even for the novice.

Aladdin incorporates 48 Channels, multiple automatic and manual crossfades, proportional softpatch with individual curve assignment, blind preset programming, inhibit function, submaster control, synthesized voice prompts and reminder memos.

Aladdin provides five 20 - step chasers with variable level settings and individual times for each step.

Aladdin provides industry standard 'USITT DMX 512' output and controls standard DMX (Digital Multiplex) dimmer racks.

Aladdin is ideal for use in Theatre, Television Production, Video Studios, Entertainment Venues, Interior Design, Environmental Design, Architectural Lighting or whenever superior lighting control is required.
